Instructions for Post Index Maintenance

Post ID System

Format: YYYY–T–NNN

Component	Meaning	Values
YYYY	Year	2026, 2027, ...
T	Type/Channel	B = Business (LSARS), T = Tech (LSA Digital)
NNN	Sequential number	001, 002, ... (resets each year per type)

Next IDs:

- Next business post: 2026–B–037
- Next tech post: 2026–T–042

Channel Strategy

Type	Channel	LinkedIn Page	Audience	Content Focus
B (Business)	LSARS	linkedin.com/company/lsars	Permit requestors, regulators, community leaders, executives	“What we do” — outcomes, trust, stakeholder value
T (Tech)	LSA Digital	linkedin.com/company/lsadigital	AI/tech audience, architects, engineers, QA	“How we did it” — AI best practices, architecture, implementation

Dependency pattern: Tech posts (T) typically repost/expand on a business post (B) to show the implementation behind the outcome. The Depends On column links them; Relationship explains why.

Workflow

1. **Create business post** (B) for LSARS channel — focus on stakeholder outcomes
2. **Create tech post** (T) for LSA Digital channel — reference business post, explain “how”

Status Definitions

Status	Meaning
draft	Initial creation, not yet reviewed
in_review	Sent to SME reviewer(s) for feedback
approved	SME approved, ready to publish
published	Live on LinkedIn

Adding a Post

Use `/new-post` command, which will:

1. Create the post folder and file
2. Add a row to the Post Index table above
3. Increment the “Next IDs” counters

Related Files
